1. Write a program to rotate a matrix in 90 degree in clock wise.
2. Factorial using recursion.
3. Print the first n prime numbers.
4. Define the structure for student name, roll number, admission date and birth year program to read the student details from user and store in the structure. Calculate age on admission and print it.
5. Write a program that takes integer as input and add all the even digits in the integer. If the sum is multi – digit number, again add all the sum is single digit and return the value.
   If the integer doesn't have the even digit, then return 0.
6. Read two strings from user. Count how many characters are the same at the same index in both strings (count 1). Count how many characters are common in both strings but in different index.(count2) **print it like this 1A3B**
   Ex. Str1 => "1087" str2 => "8071" Output : 1A3B
7. Longest consecutive characters in the string.

8. Sorting of each row of 2D array.
9. Magic numbers.
10. Reversing MSB LSB.
11. Structure.
12. Spiral 2D matrix.
13. Duplicates of 1D array.
14. Dynamic memory allocation for structure.
15. Print binary using recursion.
16. Transpose with a missing element.
17. Reverse the word.
18. Remove duplicate from array.
19. From the pair of arrays, subtract.
20. Find the sum of even numbers from the number = 123456 and reduce it to 2.
21. Monkey program.
22. Bitwise program (replace the bits).
23. 2D program transpose.
24. 2D array sum of two no's using function.
25. Array of structure.

26. Sum of rows and columns.
27. Reverse a number by using bitwise.
28. Rotate matrix 90 degree clock wise direction.
29. Car program
30. Fahrenheit to Celsius start stop increment.
31. Length of array and subtract.
    bbc $ bbe *

1. Remove duplicates in array.
2. Reverse the word from string .
3. Matrix
4. Pattern
5. Reverse the vowels(e.g hello => holle) string.
6. If duplicate array in character then return 1. If not return 0.
7. Structure find the age.
8. Recursion
9. Reverse the number using bitwise.(11223344 ➔ 44332211)
10. Palindrome in range 100 t0 200 print maximum.
11. Reverse binary & print in bitwise.
12. Str1 = abcd & str = abcde return extra character.
13. Print all subsets of array.
14. Skipping index and count (e.g : 2,1,2,4,5,6) O/P = 3.
15. Disk in recursion.
16. Prime number upto m to n.
17. Gcd
18. Cars
19. Reverse the 1D array.
20. Word1 :- Hello, word2:- world . O/P ➔ HWeolrllod.
21. Insert a new value(sorted list)
22. Disk.
23. MSB to LSB number.
